Beacon

Beacon is a HIPAA-compliant online web portal that connects to your health plan member's portal and evaluates how you're using your benefits so you can qualify for a better plan based on your needs.

1. Have your health plan's username, password, and any secondary questions ready (including for any dependents). If you need to make an account, visit the health plan member portal to set one up.

2. Open the email from Beacon and complete the registration process by typing in your health plan's username, password, and secondary questions if applicable.

That's it. We'll use this information only for evaluating a plan that meets the needs of the participating group so you can qualify for a better plan.

Once you're signed up, you can review your benefits spend for you and any dependents.
